

## **BRITON EMS HAS THE ANSWER TO... EVERYTHING**

Contract manufacturer Briton EMS is proud to announce a new partnership with leading Cambridgeshire based Product Design Company **42 Technology**.

42 Technology (42T), specialises in delivering innovative product design to specification, to budget and on time to a range of industry sectors. A particular strength of 42T is their electronics design capability. Briton EMS Chairman Tony Abri is rightfully enthusiastic about this partnership. "Our strengths lie in electronic manufacturing services from simple PCB assemblies to full product build and test. Although we have a limited design capability, this new partnership will enable us to offer a much broader service giving customers the satisfaction of knowing their products will be designed for manufacture, prototyped and ultimately built in production all managed through one channel"

The search for an ideal partner was carefully planned. Briton's Business Development Manager Peter Towler was keen to find a design company which matched our needs. "I am frequently asked for design capability and we needed to find a company that could not only be comfortable with product innovation and full product design but would also be happy to get involved at PCB design level. 42T employ a team of full time professionals as well as a network of external associates with skills in a variety of disciplines. Their market sectors match ours and their set up gives us flexibility when working with our customers, providing a service that at base level need not be too expensive".

42T Director Dave Wilson is thrilled with the new partnership. "We are often asked by our customers to recommend an electronics manufacturing company and Briton EMS has a superb reputation. We are confident that this relationship will deliver innovative new products from design right through to production"

Briton EMS and 42T are already working on a number of new projects.

Briton EMS, based in Bedford, is a leading UK Contract Electronic Manufacturing Company specialising in full product and sub-assembly build. Market sectors include Industrial, Instrumentation, Medical, Broadcast, and RF technology.
